Waterways "Fail Safe" drinking water purifiers are exceptional in that unlike normal filters, the system is NOT subject to mains pressure during periods of in-operation. "Fail Safe" is the latest technology and an effective safeguard against over-pressurisation of filter housings. With "Fail Safe" the water pressure is held at the chrome plated brass faucet not the filter housings. Authorities have commented that it is likely that all drinking water purifiers will be required to incorporate "Fail Safe's" advanced design technology in years to come. Except in rare cases where undersink design precludes this type of installation, all Waterway's drinking water purifiers are "Fail Safe" protected.

Waterways's drinking water purifiers are Australian Standards approved.
